Agenda Number: 19.

OPERATIONS, SAFETY AND CUSTOMER EXPERIENCE COMMITTEE FEBRUARY 17, 2022

SUBJECT: SECOND GENERATION BUS MOBILE VALIDATORS

ACTION: APPROVE RECOMMENDATION

RECOMMENDATION

CONSIDER:

- A. ESTABLISHING capital project for the purchase and installation of the 2nd generation bus mobile validators and 16-port managed ethernet switches in order to support the All Door Boarding project;
- B. APPROVING and ADOPTING the life-of-project budget of \$18,100,000; and
- C. AUTHORIZING the Chief Executive Officer to execute Modification No. 165 to Contract No. OP02461010 with Cubic Transportation Systems, Inc. (Cubic) for the purchase of 2900 Second Generation Bus Mobile Validators (BMV's) and installation of BMVs and 16-port managed ethernet switches at Metro contract service locations in the amount of \$9,545,440 increasing the total contract value from \$373,825,899 to \$383,371,339.

<u>ISSUE</u>

All Door Boarding (ADB) is one of the key components in the NextGen Bus Plan to improve transit speed, reliability and customer experience. ADB was successfully piloted with BMVs installed on the J Line (Silver) 910/950 in 2016, Metro Rapid Lines 720 and 754 in 2018. However, these BMVs with 3G cellular technology are reaching obsolescence and will no longer be supported by cellular carriers that have moved to 4G and 5G technologies. The expansion of ADB to Tier One and Tier Two networks as outlined in the NextGen Bus Plan involves the purchase and installation of second generation BMVs by all doors of each bus to process Transit Access Pass (TAP) card fare payments. Metro requires funding authorization and additional contract authority for the acquisition, and installation, of the new BMVs to improve speed reliability and customer experience on these high-frequency bus service corridors.

Purchase and installation of the managed 16-port ethernet switch is a critical component for the implementation of ADB. The ethernet switch allows the new BMVs to connect to the farebox in order to transmit updated bus assignment data and fare tables to the BMVs remotely and instantly without

File #: 2021-0525, File Type: Contract

relying on manual configurations, providing greater operational flexibility to ensure buses can be assigned to different lines on a given service day. The ethernet switch will also allow the new BMVs and fareboxes to connect to the bus router for modern cellular communications. These 16-port managed switches will also be used for the expansion and upgrade of other on-board systems such as the automatic passenger counters (APC), SmartDrive, Vehicle Health Monitoring System HAM, and Hanover Headsign.

On August 19, 2021, the California Transportation Commission (CTC) approved Metro's NextGen Bus Speed & Reliability Improvements for a \$25 million award from the 2020 Local Partnership Program (LPP), plus the local match of \$25 million for a total of \$50 million. \$10 million of this LPP award is allocated for the procurement and installation of the second generation BMVs on the Metro buses assigned to the NextGen Tier One and Tier Two network. The Baseline Agreement with CTC is included in Attachment E.

BACKGROUND

Background

In June 2016, ADB was successfully piloted on the J Line (Silver) 910/950 and subsequently piloted on Metro Rapid Lines 720 and 754, which resulted in reduced bus stop delay and enhanced customer experience. Boarding access to all doors results in a more even distribution of the passenger loading, reduced passenger flow friction between passengers boarding and exiting the front door, particularly when a wheelchair ramps is deployed, and reduced passenger crowding around Metro bus operators.

In 2018, Metro began the process of redesigning the bus system to better meet the needs of current, former and future riders. The NextGen Bus Plan was authorized by the Metro Board in February 2020 for public review. The Plan proposed improvements that would speed up buses, double the number of frequent Metro bus lines and provide over 80% of current bus riders with all day, frequent service. The Plan would also ensure walking distance access to transit for 99% of current riders and improve the waiting experience. Based on the NextGen Bus Study, the primary benefits of All Door Boarding are estimated to be 2.5% travel time savings. ADB would expedite boarding and reduce dwell time at bus stops, and thereby enhancing convenience and reducing travel times for bus riders.

To facilitate ADB on the Tier One and Tier Two corridors outlined in the NextGen Bus Plan, staff applied for and received the allocation of \$817,000 for Bus Operations Subcommittee (BOS) 1% Federal grant in April 2021 for All Door Boarding activities including TAP validators and other speed and reliability improvements. Purchase and installation of new BMVs on Metro buses is one of the four components included in the LPP proposed project request.

DISCUSSION

File #: 2021-0525, File Type: Contract

BMVs are required to support the expansion of ADB, including the installation of BMVs on buses assigned to Tier One and Tier Two networks in order to expedite boarding, reduce dwell times at bus stops and reduce travel times thereby enhancing the customer experience. 60-foot articulated buses would have two BMVs, one in the middle door and one in the rear door while 40-foot and 45-foot buses would have one BMV in the rear door. Customers can also use the existing validator on the farebox by the front door or BMVs by the middle/rear doors as access points for All Door Boarding. Access to all doors also reduces crowding at the front of the bus addressing potential safety concerns raised by our customers and bus operators about maintaining social distancing due to COVID-19 and the latest Omicron variant. All door boarding has been very popular with riders throughout the COVID period for both enhanced safety and convenience.

The new BMVs are more reliable, utilize 4G LTE cellular communications and are open payment ready. The devices and back office can be programmed in the future to accept Visa, Mastercard, American Express and/or Discover. The new devices offer enhanced transaction security and are certified by the Payment Card Industry Data Security Standard (PCI DSS) and Europay, MasterCard, and Visa (EMV) global standard. Attachment D provides additional specifications on the new BMVs.

The new BMVs would also enhance new and equitable initiatives built on the TAP card platform, such as the Fareless System Initiative (FSI), Low Income Fare is Easy (LIFE) and Fare Capping programs as the new BMVs have expanded capacity to deliver over 50% more autoloads than the existing BMVs. The new BMVs also operate more quickly and reliably, thereby enhancing the customer experience as they board the bus.

Installation of the 16-port managed ethernet switch allows for automatic configuring of BMV's to support ADB and enables bus assignments to be uploaded to BMVs automatically without requiring manual configuration by the Maintenance staff at the daily rollout. The installation of ethernet switch would also allow the farebox and BMV to communicate with the back office via the bus router with modern cellular communications. This would result in eliminating the overlapping monthly cellular service fees for fareboxes and BMVs with an estimated savings of \$66,000 monthly or \$792,000 annually.

DETERMINATION OF SAFETY IMPACT

Boarding access to all doors means a more even distribution of the passenger load, reduced passenger flow friction between passengers boarding and exiting at the front door, particularly when a wheelchair ramp is deployed, and reduced passenger crowding around Metro bus operators.

FINANCIAL IMPACT

Total LOP funding in the amount of \$18,100,000 will be included in Cost Center 3151- Service Planning & Scheduling. After completing the capital project, staff currently estimates annual operating costs of \$307,330. This amount will fluctuate as implementation and ADB operation progresses. A summary of LOP capital budget and estimated operating costs is included in Attachment F of this report.

Because this is a multi-year project, the respective Cost Center Manager within Operations will be responsible for ensuring that the future year balance of capital funding, as well as operating funding is programmed and budgeted.

Impact to budget

The source of funds for this project comprises of the \$10 million in LPP, the \$1 million BOS grant included a 20% local match; the balance of the life of project budget will come from Federal, State, and local funds that are bus and rail eligible and available at the time of budget. Funds needed to initiate the system design phase of the project is available in FY2022 annual budget in cost center 3151.

EQUITY PLATFORM

Access to all doors means a more even distribution of the passenger load and fewer crowding conflicts at the front door. ADB also allows passengers who use wheelchairs to board with rampassist in the front of the bus while other passengers board from the other doors. Streamlining boarding due to ADB will reduce crowding on buses, which also can improve onboard security and safety. ADB will better enable physical distancing between customers and between bus operators and customers, which has become imperative in the wake of COVID-19. In addition, ADB will decrease wait times due to faster and more reliable transit service thereby limiting any perceived unsafe and security concerns.

Rear door boarding requires a TAP card for customers to validate their fares on the BMV's. Therefore, cash paying customers will have to board the bus through the front door to pay their fares on the fareboxes. In order to mitigate this limited access to board the bus for cash paying customers, accompanying the rollout of ADB expansion, Metro will implement a countywide public information campaign to communicate the improvement to boarding and TAP only fare payment. Advertisements on shelters, vehicles, social media, billboards and traditional media would be used to convey the new boarding process and benefits of ADB. Transitioning customers from cash to TAP cards will be facilitated through customer education, marketing and community outreach programs. The fareboxes are also programmed to allow customers to purchase TAP cards and add value to their cards.

These improvements in customer experience with the implementation of ADB would benefit transportation equity by providing faster and more reliable bus service to current Metro customers and would increase the competitiveness, and attractiveness of the bus system for new customers.

Additionally, this contract award has made a 5.65% Disadvantaged Business Enterprise (DBE) commitment. The project is 86% complete and the current DBE participation is 6.96%, exceeding the commitment by 1.31%.

IMPLEMENTATION OF STRATEGIC PLAN GOALS

The recommendation supports strategic plan Goal 1: Provide high quality mobility options that enable people to spend less time traveling and Goal 2: Deliver outstanding trip experience for all users of the

transportation system. This project will improve the speed and reliability of Metro Tier One and Tier Two bus service that runs through the heart of some of the most congested areas in the Los Angeles County with some of the most equity focused communities. Furthermore, this project would enhance transit customer experience in those areas by reducing dwell time and a more even distribution of passenger load to minimize overcrowding in the front of the bus.

ALTERNATIVES CONSIDERED

The alternative to the proposed staff recommendation is to not procure the new BMV's to support ADB Tier One and Tier Two corridors. However, this is not recommended since CTC has already approved funding for Metro's Speed and Reliability Improvements Program with \$25 million for BMVs to implement All Door Boarding (\$10 million) and NextGen Transit Signal Priority Project (\$15 million). Delay to purchase and install BMVs may jeopardize the awarded LLP grant in its entirety. Furthermore, the existing BMV's are obsolete with dilapidated 3G cellular technology no longer supported by cellular carriers and no longer available for purchase. Without the installation of the second generation BMV's on all doors, customers would not benefit from shorter dwell times, and Metro would not be able to transit speed and reliability as quickly, without additional resources.

NEXT STEPS

Upon Board approval, staff will execute Contract Modification No. 165 with Cubic Transportation Systems, Inc. and proceed with software design and development of the new BMV's and prioritize the installation on buses assigned to Tier One and Two corridors.

A. Procurement Background

This Board Action is to approve Contract Modification No. 165 for the procurement and upgrade of 2,900 Bus Mobile Validators (BMV).

Metro has successfully implemented All-Door Boarding (ADB) with first generation BMVs on a few Metro Rapid bus lines. Upon Board approval, Metro will install the latest generation BMVs on all Metro buses including replacing the existing BMVs with the new generation BMVs. Replacement is necessary due to obsolescence of the first generation BMVs. Additionally, 3G cellular communication of the first generation BMVs will no longer be supported by the Telephone Service Provider (TSP).

This Contract Modification will be processed in accordance with Metro's Acquisition Policy.

On February 20, 2002, Contract No. OP02461010 was awarded by the Metro Board to Cubic Transportation Systems, Inc. (Cubic). The Contract provides a countywide fare collection system to serve Metro's public transit customers. Cubic developed the NextFare software application and related databases which is the core technology

managing the entire Transit Access Pass (TAP) network consisting of bus and rail equipment and devices. NextFare communicates with all of the fare collection devices including BMVs which contain proprietary intellectual property. Therefore, Cubic is the only company that can provide the necessary BMVs as well as maintain them.

Please refer to Attachment B – Contract Modification/Change Order Log.

B. Cost/Price Analysis

The recommended price has been determined to be fair and reasonable based upon price analysis, technical evaluation, independent cost estimate (ICE), and negotiations. Metro's ICE includes a total of 2,586 BMVs, but an additional 314 BMVs are now required, which accounts for the difference between the ICE and the negotiated amount.

| Proposal Amount | Metro ICE | Negotiated Amount |

DEOD SUMMARY

SECOND GENERATION BUS MOBILE VALIDATORS/OP02461010

A. <u>Small Business Participation</u>

Cubic Transportation Systems, Inc. made a 5.65% Disadvantaged Business Enterprise (DBE) commitment. The project is 86% complete and the current DBE participation is 6.96%, exceeding the commitment by 1.31%.

The Universal Fare System (UFS/TAP) Base Contract #OP-02-4610-10 was awarded in 2002 in the amount of \$84,003,444 to Cubic Transportation System, Inc. The base contract requirements were for the design, manufacturing, site preparation, installation and testing of a turnkey fare collection system.

TAP has long since transitioned out of the development phase of the contract. TAP now manages the Operations and Maintenance (O&M) phase of the program. Under the O&M phase, Cubic continues to meet and exceed its DBE goals, notwithstanding many of the original subcontractors have completed their scope of work and are no longer part of the current phase.

¹Current Participation = Total Actual amount Paid-to-Date to DBE firms ÷Total Actual Amount Paid-to-date to Prime.

B. Living Wage and Service Contract Worker Retention Policy Applicability

The Living Wage and Service Contract Worker Retention Policy is not applicable to this contract.

C. <u>Prevailing Wage Applicability</u>

Prevailing wage is not applicable to this contract.

D. Project Labor Agreement/Construction Careers Policy

Project Labor Agreement/Construction Careers Policy is not applicable to this Contract. Project Labor Agreement/Construction Careers Policy is applicable only to construction contracts that have a construction contract value in excess of \$2.5 million.

CUBIC Transportation Systems

Features

- Accepts EMV open payments with contactless bankcards and mobile wallets, account based payments, agency-branded smartcards, virtualized smartcards and barcode tickets
- EMVCo L1 certified with L2 certifications for Visa, Mastercard, Amex and Discover
- Ultimate in EMV open payment security, plus PCI PTS ready and full P2PE capability
- Bright, full color LCD display with audible alerts for clear passenger and driver feedback
- Vehicle wired connectivity, with options for wireless 4G LTE, Wifi, Bluetooth Classic and Bluetooth Low Energy
- Powerful 1.6GHz ARM Cortex Quad-Core processor with 2GB DRAM, and 16GB of memory for faster payment
- Touchscreen option where passenger input is required

Cubic Validator 3.0

The Cubic Validator 3 collects passenger payments on board buses and trams. Contactless bankcards and mobile wallets are accepted, with barcode tickets and agency-branded smartcards. Any media or credential, physical or virtual, can be used for accountbased travel. With Cubic Validator 3, transportation operators deploy new and secure open payment schemes rapidly, in the knowledge that existing ticketing and payment schemes can be supported.

Success with open payments means a guarantee of payment security and a proven path to brand certification. The validator is EMV L1 certified with EMV L2 certifications for Visa, Mastercard, Amex and Discover, and will support PCI PTS certification on request. When deployed with a PCI DSS certified payments module such as the Cubic Payment Application, the validator offers proven P2PE certified payments for the ultimate in transaction security.

Fast boarding times are essential for on-time arrival, increasing ridership and driving revenue. The validator's powerful processor guarantees rapid and accurate validation, and with clear signage, a large screen, and built-in speaker for audible feedback, each passenger is guided quickly through boarding and payment.

Our customers also require flexibility. Options include a large touchscreen display, barcode reader, cellular 4G LTE communications, WiFI and Bluetooth Classic and Low Energy. The validator is also available in a range of colors to reinforce our customers' branding.

Specifications

| PHYSICAL | |
|---|--|
| Dimensions | 230 x 175 mm (H x W); < 100mm depth to pole |
| Weight | 1kg |

ROAD REPAIR AND ACCOUNTABILITY ACT OF 2017 PROJECT BASELINE AGREEMENT NextGen Bus Speed & Reliability Improvements

Resolution LPP-P-2122-03B

(will be completed by CTC)

1. FUNDING PROGRAM

Active Transportation Program

Local Partnership Program (Competitive)

- Solutions for Congested Corridors Program
- State Highway Operation and Protection Program

Trade Corridor Enhancement Program

2. PARTIES AND DATE

2.1 This Project Baseline Agreement (Agreement) for the NextGen Bus Speed & Reliability Improvements, effective on, <u>August 19, 2021</u> (will be completed by CTC), is made by and between the California Transportation Commission (Commission), the California Department of Transportation (Caltrans), the Project Applicant, Los Angeles County Metropolitan Transportation Authority, and the Implementing Agency, Los Angeles County Metropolitan Transportation Authority, sometimes collectively referred to as the "Parties".

3. RECITAL

- 3.2 Whereas at its December 2, 2020 meeting the Commission approved the Local Partnership Program (Competitive), and included in this program of projects the *NextGen Bus Speed & Reliability Improvements*, the parties are entering into this Project Baseline Agreement to document the project cost, schedule, scope and benefits, as detailed on the Project Programming Request Form attached hereto as <u>Exhibit A</u> and the Project Report attached hereto as <u>Exhibit B</u>, as the baseline for project monitoring by the Commission.
- 3.3 The undersigned Project Applicant certifies that the funding sources cited are committed and expected to be available; the estimated costs represent full project funding; and the scope and description of benefits is the best estimate possible.

4. GENERAL PROVISIONS

The Project Applicant, Implementing Agency, and Caltrans agree to abide by the following provisions:

- 4.1 To meet the requirements of the Road Repair and Accountability Act of 2017 (Senate Bill [SB] 1, Chapter 5, Statutes of 2017) which provides the first significant, stable, and on-going increase in state transportation funding in more than two decades.
- 4.2 To adhere, as applicable, to the provisions of the Commission:

| Resolution <i>Insert Number</i> , "Adoption of Program of Projects for the Active Transpor dated | tation Program", |
|--|------------------------------------|
| Resolution # G-20-79, "Adoption of Program of Projects for the Local Partnership Pro dated December 2, 2020 | gram", |
| Resolution <i>Insert Number</i> , "Adoption of Program of Projects for the Solutions for Co dated | ongested Corridors Program", |
| Resolution <i>Insert Number</i> , "Adoption of Program of Projects for the State Highway dated | Operation and Protection Program", |
| Resolution <i>Insert Number</i> , "Adoption of Program of Projects for the Trade Corridor dated | Enhancement Program", |

- 4.3 All signatories agree to adhere to the Commission's Local Partnership Program (Competitive), Guidelines. Any conflict between the programs will be resolved at the discretion of the Commission.
- 4.4 All signatories agree to adhere to the Commission's SB 1 Accountability and Transparency Guidelines and policies, and program and project amendment processes.
- 4.5 The Los Angeles County Metropolitan Transportation Authority agrees to secure funds for any additional costs of the project.
- 4.6 The Los Angeles County Metropolitan Transportation Authority agrees to report to Caltrans on a quarterly basis; after July 2019, reports will be on a semi-annual basis on the progress made toward the implementation of the project, including scope, cost, schedule, outcomes, and anticipated benefits.
- 4.7 Caltrans agrees to prepare program progress reports on a quarterly basis; after July 2019, reports will be on a semi-annual basis and include information appropriate to assess the current state of the overall program and the current status of each project identified in the program report.
- 4.8 The Los Angeles County Metropolitan Transportation Authority agrees to submit a timely Completion Report and Final Delivery Report as specified in the Commission's SB 1 Accountability and Transparency Guidelines.
- 4.9 All signatories agree to maintain and make available to the Commission and/or its designated representative, all work related documents, including without limitation engineering, financial and other data, and methodologies and assumptions used in the determination of project benefits during the course of the project, and retain those records for four years from the date of the final closeout of the project. Financial records will be maintained in accordance with Generally Accepted Accounting Principles.
- 4.10 The Transportation Inspector General of the Independent Office of Audits and Investigations has the right to audit the project records, including technical and financial data, of the Department of Transportation, the Project Applicant, the Implementing Agency, and any consultant or sub-consultants at any time during the course of the project and for four years from the date of the final closeout of the project, therefore all project records shall be maintained and made available at the time of request. Audits will be conducted in accordance with Generally Accepted Government Auditing Standards.

5. SPECIFIC PROVISIONS AND CONDITIONS

- 5.1 <u>Project Schedule and Cost</u> See Project Programming Request Form, attached as <u>Exhibit A</u>.
- 5.2 Project Scope

See Project Report or equivalent, attached as <u>Exhibit B</u>. At a minimum, the attachment shall include the cover page, evidence of approval, executive summary, and a link to or electronic copy of the full document.

5.3 Other Project Specific Provisions and Conditions

The four project components have been revised to organize work by contract activity and to focus LPP-C funds on two components and local match funds on the other two components. The overall total project budget, match commitment and schedule has not changed.
The proposed funding plan assumes non-proportional drawdown/expenditure of grant funds versus match (local) funds and will be requested at time of allocation.

NextGen LADOT Wireless Cloud-Based Transit Signal Priority Upgrade/Expansion

Location (Project Limits), Description (Scope of Work)

Original - Purchase and installation of 2,500 Transit signal priority transponders (TSP) on the undercarriage of buses to communicate with loop detectors at intersections in the City of Los Angeles Tier One corridors.

Revised - The development/implementation of an upgraded Wireless Cloud-Based Transit Signal Priority (TSP) system, the addition of 200 traffic signals to the wireless system with Ethernet communication on the NextGen Tier one Corridors in the City of Los Angeles and upgrade the software on over 2,500 Transit Metro buses to allow them to communicate with the Wireless Cloud-Based TSP systems along the NextGen Tier 1 Corridors within the City of Los Angeles.

Purpose and Need

Original - The Los Angeles Department of Transportation has installed a loop-based transit signal priority (TSP) system on select corridors within the City of Los Angeles. This system requires buses to be equipped with transponders to trigger the signal to allow buses to proceed through intersections with priority. Currently, only Metro Rapid (Red) buses have these transponders. Based on the NextGen Transit First Service Plan, Metro is phasing out the Metro Rapid system in favor of a new high-frequency Tier One network that is more extensive than the Rapid system and will use all types of Metro buses. Therefore, all Metro buses need to have TSP transponders to benefit from signal priority.

Revision - LADOT has installed a loop-based transit signal priority (TSP) system on select corridors within the City of Los Angeles. Based on the NextGen Transit First Service Plan, Metro is phasing out the existing Metro Rapid system in favor of a new high-frequency Tier One network that is more extensive than the existing rapid system and will use all types of Metro buses. This project will upgrade the loop-based technology to GPS-Wireless technology using Internet Cloud Service TSP system to improve performance and reliability and reduce maintenance to the TSP system. Additionally this project will add an additional 200 intersections to the Internet Cloud Service TSP system for 200 intersections and install software on over 2,500 Metro buses to allow all those buses to use the Internet Cloud Service TSP system.

Additional Information

Original Benefits and Outputs:

Equipping all Metro buses with TSP transponders will reduce travel time for buses operating on high frequency corridors that have TSP within the City of Los Angeles, as they significantly reduce wait times for buses at signalized intersections. As Metro and LADOT expand TSP infrastructure, all Metro buses will be able to take advantage of the time savings provided by this infrastructure.

Revised Benefits and Outputs:

This project will provide Metro buses in the Tier 1 Corridors with the benefits of reduced travel time and increased schedule/headway adherence. The new Wireless Cloud-Based TSP Service will also reduce the maintenance efforts needed to keep the TSP up and running. Further, it would establish a platform in the future for all Metro buses to receive priority treatments at any of the signalized intersections within the City of Los Angeles.

Explanation of PPR revisions:

The NextGen Project consist of 4 components each with its own PPR. We revised the organization of the project work included in each of the 4 components of this project and have revised the PPR's to better clarify the project work to be completed by each project component. We did not increase the project budget but we moved \$14 mil of LPP funds into this PPR and removed \$500,000 in local money increasing this component budget from \$1.5 mil to \$15 mil. We did extend the end of the Construction and Closeout dates to accommodate the revised work. This component was revised to combine the City of LA signal priority elements with improvements to the communication software on the 2,500 Metro buses.

The PPR updates the project title & description and the category and outputs to better reflect the actual work to be completed in the component. Additionally, the project schedule was updated to reflect the actual environmental approval time line and the revised the design and construction timelines. We also note that this project component will have no ROW work completed.

We changed the project title from NextGen Transit Signal Priority transponders to NextGen LADOT's Wireless Cloud-Based Transit Signal Priority Upgrade/Expansion to better reflect work to be completed in this component.

Proposed Funding Plan assumes non-proportional drawdown/expenditure of grant funds versus match (local) funds and will be requested at time of allocation.

Project Title

NextGen Bus Mobile Validators for All-Door Boarding

Location (Project Limits), Description (Scope of Work)

Purchase and installation of 2,900 bus mobile validators (BMV) on Metro buses that operate on Tier One and Two high frequency corridors in Los Angeles County to enable all-door boarding.

Date 08/03/2021 16:45:32

Purpose and Need

Metro is proposing to expand All Door Boarding (ADB) to all buses that operate on the highest frequency Tier 1 and Tier 2 routes. ADB will expedite boarding and reduce dwell time at bus stops, and thereby enhance convenience and reduce travel time for Metro customers. The expansion of ADB involves the purchase and installation of bus mobile validator (BMV) devices by all doors of each bus to process TAP fare payments. 60-foot articulated buses will have three access points (front, middle, and rear) and 40 and 45-foot buses will have two access points (front and rear).

Date 08/03/2021 16:45:32

Additional Information

Benefits and Outputs: All Door Boarding will expedite boarding and reduce dwell time at bus stops, thereby improving the speed of bus service on Metro bus routes. Access to all doors also means a more even distribution of the passenger load, a reduction of boarding-related safety hazards and fewer opportunities for customer injuries. Additionally, ADB allows passengers who use wheelchairs to board with ramp-assist in the front of the bus while other passengers board in the rear. Further, ADB will better enable social distancing between customers and between customers and bus operators.

Explanation of PPR Revisions:

Although we have revised the components of the NextGen project, this component and PPR only require one revision. We had to revise the Category and Output section because it was incorrectly stated as Rail-Multi modal and it should be TMS. The funding mix was revised to fund the component 100% with LPP funds and will be matched by other locally funded components.

Proposed Funding Plan assumes non-proportional drawdown/expenditure of grant funds versus match (local) funds and will be requested at time of allocation.

Project Title

NextGen Bus Priority Lanes on LA Streets

Location (Project Limits), Description (Scope of Work)

Original -Design and implementation of bus priority lanes and other operational improvements on up to 80 lane miles of streets of LA Metro's Tier One network in the City of Los Angeles.

Revised - Design and implementation of bus priority lanes and other operational improvements to 80 lane miles of streets of LA Metro's Tier One network in Los Angeles county, with a majority of these streets within the City of Los Angeles.

Date 08/03/2021 17:29:03

Purpose and Need

In recent years, the primary contributor to slow speeds and poor schedule reliability on Metro's bus system has been growing traffic congestion on city streets. This congestion directly increases Metro's operating costs and reduces the quality of the service that Metro can afford to provide. In response, Metro's NextGen Transit First Plan will reorganize bus corridors into four tiers of service standards. The Tier One corridors will have the highest frequency of service and will operate on transit priority streets. Converting curb lanes to bus priority lanes on some of these streets will improve service speed and reliability by allowing buses to bypass vehicular congestion.

Additional Information

Benefits and Outputs:

Providing high-quality transit options with consistent, and competitive, travel times is the single most important step Metro can take to retain and grow ridership, increase the carrying capacity of local roadways, and shift regional travel patterns toward more efficient modes. Installing new bus lanes will allow Metro's highest frequency buses as well as municipal bus operators to move unencumbered through the core of the City of Los Angeles. Converting curb lanes to bus lanes has also been shown to improve safety through crash reduction.

Explanation of PPR revisions:

The NextGen Project consist of 4 components each with its own PPR. We revised the organization of the project work included in each of the 4 components of this project and have revised the PPR's to better clarify the project work to be completed by each project component. We have not increased the budget or asked for additional time to complete the project but we have moved out the construction completion date and end closeout date to reflect the time frame for the revised work being completed in this component. Additionally, we have revised the funding plan and programmed all of the funds for this work from Prior, FY21/22 and FY22/23 to FY 21/22 due to reflect program year instead of cashflow. We have removed \$8 mil in LPP Funds and added an additional \$7 mil in local funds to the current \$8 mil in local funds. We have now reduced the budget from\$16 mil to \$15 mil and programed all \$15 mil in local funds to 21/22 to serve as match to LPP funded components.

This PPR updates the project title, description and the category and outputs page to better reflect the work to be completed in this component. Additionally the project schedule was updated to reflect the actual environmental approval date and the revised design and construction timelines. We also note that this project component will have no ROW work completed.

Additionally, we changed the project title from NextGen Bus Speed Improvements for LA Streets to NextGen Bus Priority Lanes on LA Streets to reflect the activities to be implemented.

Proposed Funding Plan assumes non-proportional drawdown/expenditure of grant funds versus match (local) funds and will be requested at time of allocation.

Project Title

NextGen Countywide Wireless Transit Signal Priority Upgrade

Location (Project Limits), Description (Scope of Work)

Original - Purchase, design and installation of transit signal priority infrastructure on at least 200 intersections and replace wireless transit signal priority infrastructure on at least 300 intersections in the Tier One Network in County of Los Angeles.

Revised - Purchase, design and installation of transit signal priority infrastructure on at least 300 intersections in the Tier One Network in the County of Los Angeles.

Purpose and Need

Original -The Los Angeles Department of Transportation has installed a loop-based transit signal priority (TSP) system on select corridors within the City of Los Angeles, and Metro and other municipalities have installed a wireless transit signal priority system on select corridors outside of the City of Los Angeles. The NextGen Transit First Service Plan will introduce an expanded number of high-frequency bus corridors that will require transit signal priority at intersections to achieve increased service speeds. Depending on the municipal jurisdiction of the intersection, this infrastructure will be comprised of loop detectors embedded in the pavement or a wireless system.

Revised - Metro and other municipalities have installed a wireless transit signal priority system on select corridors outside of the City of Los Angeles. The NextGen Transit First Service Plan will introduce an expanded number of high-frequency bus corridors that will require transit signal priority at additional intersections to achieve increased service speeds.

Additional Information

Benefits and outputs:

Increasing the number of intersections with transit signal priority on high-frequency corridors will reduce travel time for buses as they significantly reduce dwell times for buses at signalized intersections. This travel time savings will allow Metro and municipal bus operators to operate faster and more efficient service.

Explanation of PPR revisions:

The NextGen Project consist of 4 components each with its own PPR. We revised the organization of the project work included in each of the 4 components of this project and have revised the PPR's to better clarify the project work to be completed by each project component. We have not increased the project budget or asked for additional time to complete the project. We have revised the funding plan for this work to focus solely on signal improvement managed by the County of Los Angeles. We have removed \$11.5 mil in LPP Funds and removed \$1.5 mil in local funds. We have now reduced the budget for this component from\$23 mil to \$10 mil and programed all \$10 mil in local funds in FY 21/22.

This PPR updates the project title & description and the category and outputs to better reflect the work to be completed in this component. Additionally, the project schedule was updated to reflect the actual environmental approval time line and revised Design and construction timelines. We also note that this project will have no ROW work to be completed. The outputs associated with the 200 LA City signals in the original version of this PPR were removed from this component and are now shown in the NextGen LADOT Wireless Cloud-Based Transit Signal Priority Upgrade/Expansion component.

Additionally, we changed the project title from NextGen Bus Speed Improvements for LA Streets to NextGen Countywide Wireless Transit Signal Priority Upgrade to better reflect work to be completed in this component.

Proposed Funding Plan assumes non-proportional drawdown/expenditure of grant funds versus match (local) funds and will be requested at time of allocation.

1. INTRODUCTION

Project Description:

The Los Angeles County Metropolitan is implementing the Bus Speed and Reliability Improvements identified in Metro's NextGen Transit First Service Plan. This project includes three major components: 1) the expansion of Transit Signal Priority (TSP) to cover all Tier One bus corridors through the installation of new TSP system and infrastructure on all Tier One bus corridors; 2) design and construction of new busonly lanes and other transit priority improvements on up to 80 lane miles on the highest frequency corridors in the City of Los Angeles and neighboring cities; 3) the purchase and installation of bus mobile validators for fare payment to enable all-door boarding on the Tier One and Two network.

Metro's Tier One Network

Purpose and Need:

Metro has begun implementing the NextGen Bus Plan, a totally redesigned bus system based on rigorous study and public involvement that will improve service for the more than 70 percent of Metro patrons who rely on the bus system, regain former patrons and attract new customers by being more competitive relative to other travel options. Based on robust public input and technical analysis, this redesigned bus system will provide faster, more frequent, and more reliable service, giving Los Angeles residents and commuters an alternative to sitting in gridlock and improving transportation equity.

In recent years, the primary contributor to slow bus speeds and poor schedule reliability has been growing traffic congestion on city streets. This congestion reduces the quality of the service that Metro can afford to provide to Los Angeles County residents and disproportionately impacts low-income riders who depend on the bus to access jobs, healthcare, and other important destinations. Indeed, during the development of the NextGen Bus Study, the public clearly told Metro that improving bus speed and reliability is the single most important step Metro can take to retain, recapture and grow ridership, increase the people throughput capacity of local roadways, and shift regional travel patterns toward more sustainable modes.

Metro and municipal buses operate on streets controlled by the City of Los Angeles and neighboring cities. Metro and the City of Los Angeles Department of Transportation (LADOT) continue to partner closely to coordinate on delivering the infrastructure improvements on important bus corridors in the City of Los Angeles. In 2018, Metro began the process of reimagining the bus system to better meet the needs of current and future riders. The NextGen Bus Plan was approved by the Metro Board in October 2020 after extensive public outreach and reviews.

The Transit First Bus Service Plan divides Metro's countywide bus network into four tiers of service based on service frequency. The Tier One network is made up of transportation spines that will receive the highest investment in customer and operations infrastructure. Over half of today's bus riders use one of the top 25 corridors that make up this core network. The peak hour frequency of service on these lines is every 5 - 7.5 min. The Tier Two network, with 10 minute peak hour headways, completes the "spontaneous use" network. 3 in 10 Metro bus riders use the Tier Two network of 19 lines. Altogether, 8 in 10 Metro bus riders use a Tier One or Tier Two corridor.

Metro has started the implementation of key components of the Plan using the "Transit First" approach including projects that speed up buses including an expansion of bus lanes, transit signal priority, and all-door boarding; make bus stops more comfortable; and add more frequent services, among other improvements. The improvements in speed and reliability, which are the focus of this Project, will improve Metro's performance as well as the performance of municipal bus lines that use high-frequency bus corridors.

2. SCOPE

Transit Signal Priority

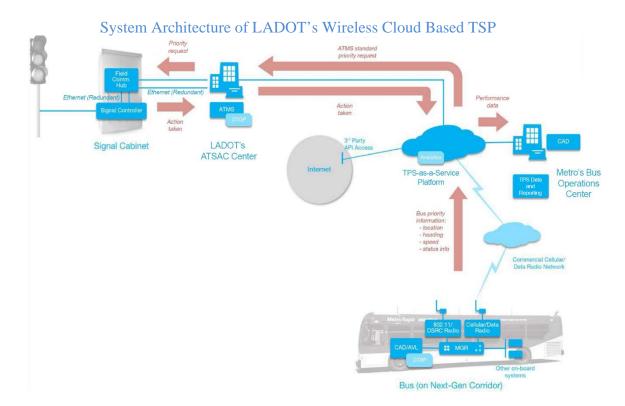

This Project includes the expansion of transit signal priority (TSP) throughout the Tier One network. TSP uses technology to reduce dwell time at traffic signals for transit vehicles by extending green lights, shortening red lights, or giving priority to

transit vehicles approaching an intersection. The TSP system can be either wireless or loop based. The wireless system typically includes bus routers and GPS units on board buses and transmit the bus ID and location information in near real-time to the Traffic Management Center (TMC) or the intersection controllers, which will then adjust traffic signal timing to reduce delays for buses. The loop based system consists of loop detectors under the roads that communicate with transponders under buses and transmit the information to TMC through the intersection traffic signal controllers for priority treatment. The central software at the TMC would confirm the bus routes and headway information before directing local controllers to implement the signal priority.

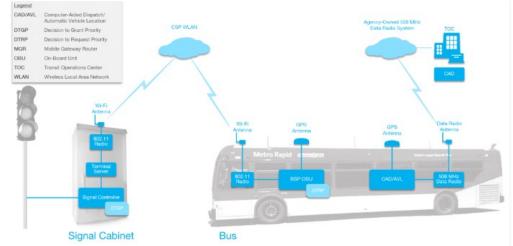

LADOT's existing TSP uses loop based technology with transponders on the previous Metro Rapid arterial network. The original scope for this Project was to expand the loop based technology to cover 200 more intersections and install transponders on all Metro buses. After further analyses, Metro in partnership with LADOT will instead implement a wireless cloud based TSP system within the City of Los Angeles. The revised scope will develop a new cloud-based software, install minor software upgrade on over 2,000 Metro buses to allow real-time update of bus locations to the cloud service and install Ethernet communication equipment at 200 traffic signals and communication hubs to enable the TSP function with a more resilient traffic control communication system. With the new cloud service, the entire Metro bus fleet of more than 2,000 vehicles will have the capability of requesting and receiving signal priority at all of the NextGen Tier 1 Corridors. The revised scope will eliminate the dilapidated maintenance needs for pavement loops, sensor cards and undercarriage transponders. As such, the revised scope will deliver greater overall efficiency and future proofing than the original scope.

The revised Project scope will include detail system design, cloud software development, minor software upgrade for the existing routers on all of Metro buses, and the purchase and installation of Ethernet communication equipment at a minimum of 200 intersections and their communication hubs. The advanced routers on-board Metro buses after a minor software upgrade would transmit the real-time bus location information to the cloud services, which will then process the priority requests in real-time and communicate with the ATCS software in the ATSAC Center. Once ATSAC receives priority request for a specific intersection, it will use the existing fiber optics communication backborne with Ethernet enhancement to direct the local controller for priority treatment. The proposd cloud service will also interface closely with LADOT's open source Mobility Data Specifications (MDS) to manage the mobility assets in the public right-of-way.

The overall system architecture for LADOT's wireless cloud based TSP is shown in the following figure.

Furthermore, the Tier One network does cover many intersections outside of the City of Los Angeles. An existing wireless TSP system called Countywide Signal Priority (CSP) maintained by Metro is already in place for a portion of these intersections. The following figure shows the system architecture of the CSP. This Project will install, replace and upgrade the exisitng wireless transit signal priority infrastructure on at least 300 intersections in the Los Angeles County area outside of the City of Los Angeles. It will include engineering design services, intersection system hardware and installation services, jurisdictional coordination support expansion and upgrade of the CSP system.

System Architecture of the Countywide Signal Priority (CSP)

Bus Corridor Speed Improvements

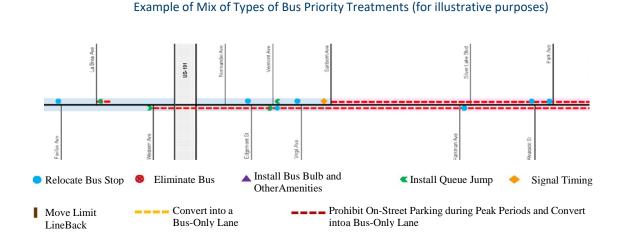

This Project will continue the implementation of the first phase of bus speed improvements on Los Angeles streets called for in the NextGen Bus Plan. Metro has initiated this phase by beginning the construction of about 10 lane-miles of bus lanes and installation of other supportive infrastructure to improve bus speeds on three Downtown Los Angeles corridors (Flower Street, 5th/6th Streets, and Aliso Street), and this Project will expand this network by another 80 lane-mile to other corridors in Downtown Los Angeles and beyond along the highest-frequency Tier One network.

A bus lane is a full lane, usually on the curb, that is repurposed for buses and right turns only, resulting in faster bus speeds and reduced intersection delay. The end result of this first phase of street improvements will be up to 90 lane-miles of corridors with bus priority lanes and other bus speed-related improvements including stop relocation/removal, queue jumping, curb modifications, and supportive signage and markings on several corridors of the Tier One network. While the Tier One network is mostly concentrated in and around Downtown Los Angeles, there are many Tier One corridors outside of Downtown Los Angeles where transit supportive infrastructure could dramatically improve bus speed and reliability.

Metro and LADOT have much experience with installing bus priority lanes on Los Angeles streets. These include the Wilshire Boulevard Bus Lanes completed in 2015 and the Flower Street Bus Lane in Downtown Los Angeles, a pilot Project completed in 2019. Metro and LADOT successfully completed the design and implementation of 5th/6th Street and Aliso Street bus lanes in 2020.

The specific designs of the street improvements will vary by corridor based on stakeholder outreach, existing built environment and, where appropriate, traffic and parking assessments. All will include street markings such as paint or other pavement marking materials, and all will include every tool in the speed and reliability toolbox (bus lanes, relocated bus stops, curb modification where appropriate, queue jumping where appropriate, and new signage).

The following figure shows an example of the range of investments on the street to be undertaken on each corridor. This figure is provided for example only and is not indicative of specific treatments to be implemented on this corridor, but shows the various tools that may be used at different locations on all corridors to improve bus speed and reliability. These tools include converting on-street parking lanes to busonly lanes during peak periods, some 24-hour bus lanes, stop relocation and rationalization, queue jumping, transit signal priority, and curb modifications. Only transit vehicles and emergency vehicles will be allowed to access the bus priority lanes during their operating hours. On some Tier One corridors, the curb lane of the entire corridor may be converted to a peak period bus lane. On other corridors, bus priority infrastructure may include queue jumping lane markings in some locations and full bus lanes in other locations depending on the need, level of congestion and context.

The first 10 lane-miles of bus priority lane corridors are being implemented in 2020-2021, and the next 10 corridors of close to 80 lane-miles, which are the focus of this Project, will be implemented in FY 22 through FY24 following LADOT's procedures for installing lane reconfigurations using a design-build delivery approach. The specific Tier One corridors to receive these treatments will be determined with LADOT between summer 2021 and spring 2022, and Metro will complete the transportation analysis to inform the design of each project during that time.

Bus Mobile Validators for All-Door Boarding (ADB)

Metro is proposing to expand All Door Boarding (ADB) to all buses that operate on the Tier One and Tier Two high frequency routes. ADB will expedite boarding and reduce dwell time at bus stops, and thereby enhance convenience and reduce travel time for Metro customers. Metro has piloted ADB on its J Line (Silver) 910/950 and Metro Rapid Lines 720 and 754, which resulted in reduced bus stop delay and improved customer experience.

The expansion of ADB involves the purchase and installation of 2,900 bus mobile validator (BMV) devices on the rear doors of each bus to process Transit Access Pass card (TAP) fare payments. 60- foot articulated buses will have two additional boarding doors (middle and rear) while 40-foot and 45-foot buses will have one additional boarding door (rear). As compared to traditional bus boarding systems, where customers board and pay the fare at the front of the bus, adding bus mobile validators (BMV) at the entrance of each door will allow prepaid customers and passholders to board at different parts of the bus. Access to all doors means a more even distribution of the passenger load, a reduction of dwell times, and fewer crowding conflicts at the front door. Additionally, ADB allows passengers who use wheelchairs to board with ramp-assist in the front of the bus while other passengers board from the other doors. Further, ADB will better enable physical distancing between customers and between bus operators and customers, which has become imperative in the wake of COVID-19. The LPP grant will support the procurement of the design and installation of the BMVs on buses.

Transitioning customers from cash to TAP boardings will facilitate the program's objective to improve speed, reliability, data collection and fare compliance. Fareboxes will be programmed with capabilities to allow customers with cash to purchase TAP cards plus fare and add stored value to cards on board the bus at stops that are not near TAP Vending Machines (TVM) or TAP vendor outlets in addition to Metro's other efforts to expand the TAP vendor network.

3. PROJECT COST AND FUNDING

The Project's estimated total cost is \$50 million, which includes \$15 million for Bus Corridor Speed Improvements, \$25 million for Transit Signal Priority and \$10 million for All-Door Boading. Metro is committed to provide \$25 million from revenue it has available at its discretion from the countywide voter-approved local sales tax measure (Proposition C). The remaining \$25 million is expected to be from the state's Local Partnership Program (LPP) funds. The Project costs have been escalated to year of expenditure.

| Project | Item | ROM | Subtotal |
|-------------------|-------------------------------------|--------|----------|
| Component | | Cost | |
| 1. Transit Signal | 1a. LADOT Cloud Based System | | |
| Priority | Detail System Design | \$2M | |
| | Bus Router Software Upgrade | \$0.3M | |
| | • Ethernet Equipment & Installation | \$4.5M | |
| | Cloud Software Development | \$6.2M | |
| | • System Integration | \$2M | |
| | | | \$15M |

The Rough Order of Magnitude (ROM) cost breakdown is shown below:

| | 1b. Countywide Wireless System Detail System Design Wireless Equipment & Installation Signal Controller Software Upgrade System Integration | \$1M \$6M \$2M \$1M | \$10M |
|--|---|------------------------------|-------|
| 2. Bus Corridor Speed Improvements | Engineering DesignPublic OutreachConstruction | \$3M \$1M \$11M | \$15M |
| 3. Bus Mobile Validators | Engineering Design Validators Procurement Installation | \$0.7M \$8.3M \$1M | \$10M |
| | | TOTAL | \$50M |

4. PROJECT SCHEDULE

| | Target |
|---|-------------|
| Key Milestones | Completion |
| Environmental Clearance (Statutory Exemption) | Spring 2021 |
| Mobile Validators Contract Award | Fall 2021 |
| Transit Signal Priority-Countywide Wireless System Contract | |
| Award | Fall 2021 |
| Transit Signal Priority-LADOT Cloud System Contract Award | Summer 2022 |
| Bus Corridor Speed Improvements Design | Winter 2023 |
| Mobile Validators Installation | Spring 2024 |
| Bus Corridor Speed Improvements Construction | Summer 2024 |
| Transit Signal Priority System Integration | Winter 2025 |
| Project Completion | Winter 2025 |

5. POTENTIAL RISK AREAS

• Project Cost Overrun

Metro has a long history of successful delivery of State-funded projects. We have a breadth of experience in handling major infrastructure projects of this scale, and larger. We have the resources and expertise to deliver this Project using the awarded state funds. We are committed to using our own resources if necessaryto address any cost overruns in accordance with LPP Guidelines.

• Project Delay

The Delivery Plan for all components of the Project is well defined. The Project is ready to be delivered beginning soon after funding award. Metro understands that all major transportation capital projects include a level of risk and takes pride in fully assessing and addressing any potential risks associated with its projects before it begins construction. Metro also understands the reporting requirements

and financial best practices associated with state grant funding. Furthermore, Metro has its own significant financial stake in the Project, and has taken necessary precautions to ensure that it is completed on-time and within budget. There are no risks to deliver the Project as there is no right-of-way acquisition required for the Project.

• System Integration

The TSP requires system integration with the existing traffic signal control systems in the City of Los Angeles and neighboing cities. The cloud based wireless system in particular is a new technology and would have to be field tested before the full implementation, which will all be included in the design and build contract with strong consultant service support. Metro has extensive experience in managing and delivering these kinds of complicated system integration projects. We believe this risk would be well managed and controlled.

• Fareless System Initiative

Metro is currently conducting a Fareless System Initiative (FSI) pilot study and a leading concept has emerged – an 18-month fareless pilot program that could provide free rides on Metro buses and rail service for low-income riders starting in January 2022, and expand to all K-12 students in August 2022. If FSI is expanded to the entire bus service for all passengers, then the mobile validators for ADB might not be needed. The current initiative is targeted at low-income riders and K-12 students and, at this time, not to cover all passengers. Nonetheless, the Project staff will monitor the progress of the FSI closely and make an informed decision as how to proceed to the procurement and installation of the mobile validators for the all-door boarding.

6. PROJECT BENEFITS

Together, these investments in infrastructure to improve the speed and reliability of the bus system will directly benefit the commutes of more than 50 percent of Metro's customers (buses carry more than 70 percent of Metro's riders systemwide and 53 percent of bus trips are on the Tier One network). Faster and more reliable bus service will save Metro customers valuable time. These improvements will benefit transportation equity by providing faster and more reliable bus service to current Metro customers, and will increase the competitiveness and attractiveness of the bus system for new users while freeing Metro's resources to focus on service enhancements.

The full completion of the Transit First Service Plan is expected to generate up to a 15%-20% increase in Metro ridership without any additional increases in revenue service hours and will benefit both Metro and municipal bus service such as LADOT's DASH and Commuter Express, and Santa Monica's Big Blue Bus (BBB) and other municipal routes that use the same streets. Additional ridership reduces vehicle miles traveled, thereby reducing air pollution and addressing traffic

congestion. The Project will optimize the use of existing streets through increased person throughput on Los Angeles County arterials.

The Project will promote safety, particularly for pedestrians and bicyclists through lane reconfigurations that will calm traffic and prohibit high speed vehicles from driving in the curb lane during peak hours. The Project will also improve passenger security through shorter wait times at bus stops and reduced crowding and dwell times from all-door boarding. The Project will promote safety, particularly for pedestrians and bicyclists through lane reconfigurations that will calm traffic and prohibit high speed vehicles from driving in the curb lane during peak hours. The Project will also improve passenger security through shorter wait times at bus stops and reduced crowding and dwell times from all-door boarding.

The end result of these service improvements would reduce bus travel times by an estimated 8.76 million person-hours, over a 20-year forecast period.

Attachment F – Bus Mobile Validators Life of Project Budget and Annual Operating Cost

| | Bus Mobile Validator | 16-port managed Switch | Total LOP Budget |
|---|-------------------------|---------------------------|------------------|
| Number of Units | 2,900 | 2,210 | |
| Equipment Cost | \$ 9,378,580 | \$ 3,620,908 | \$ 12,999,488 |
| Installation Labor (Metro and Cubic) | \$ 3,495,222 | \$ 567,710 | \$ 4,062,932 |
| Project management | \$ 775,537 | \$ 262,043 | \$ 1,037,580 |
| Total Life of Project Budget | \$ 13,649,339 | \$ 4,450,661 | \$ 18,100,000 |

Life of Project Budget:

Annual Operating Cost:

| | | Ope | Operating Cost | |
|------------------|-----------------------------|-----|----------------|--|
| Metro Operations | Labor Cost | \$ | 279,119 | |
| Cubic Contract | Maintenance Service | \$ | 21,629 | |
| | Total Operating Cost | \$ | 300,748 | |
